ADVANTAGE SERIES

SCARIFLEX R6S5 960

WPSCA960-01

ADVANTAGE SERIES

The SCARIFLEX Advantage is a meadow harrow specially optimised to meet the needs of cattle farmers wanting to keep the grass dense for their cattle. Thanks to a 9.6 m working width and the perfect complementarity of the tools allowing to harrow dungs, molehills and scarify in one single passage, this harrow can restore the complete balance of a large meadow in record time. Fitted with a 300 l air seeder, it also allows to simultaneously refill bare areas with grass.

- ✓ Large working width (9.6 m)
- ✓ 5-section chassis (1.20 m + 2.40 m + 2.40 m + 2.40 m + 1.20 m) with double hydraulic folding system
- ✓ Structure and tools fully made of galvanized special steel. Shot-blasted and then painted (2K) blades in treated steel
- ✓ 6 rows of tools for an intensive and precise work:
 - 1 row of 60 cm leveling scrapers on half-flexible leaves;
 - 5 rows of spring tines (Ø 8 mm).
- ✓ Independent adjustment of the work intensity of every tool:
 - with the gauge wheels (scrapers);
 - with a lever on the rows of flexible tines so as to have the same angle on all elements.
- ✓ Flexible hitch to follow the ground relief perfectly and limit vibrations
- ✓ Automatic locking in transport position (mechanical unlocking by means of a cord from the cabin)
- ✓ 2 pairs of rubber wheels (Ø 375 x 150 mm)
- ✓ DELIMBE 300 l air seeder: turbine with hydraulic drive, control box and "high-flow" distributor (recommended for grass, grains and vetches)
- ✓ Compatible with 120-hp tractors or more

With the "Advantage" concept, JOSKIN wanted to prove that it was possible to reduce the price of agricultural machines without having an impact on quality. To get rid of this budget constraint, JOSKIN bet everything on a "mass" production that was until then not used in the agricultural trailer sector. The concerned models are indeed assembled on dedicated assembly lines so as to produce identical series of machines. Producing a large quantity of a model implies more advantageous prices for the raw materials, a more profitable distribution of the workforce and a higher efficiency of the automated industrial machines. The resulting savings have then a direct impact on the sale price and allow to deliver a high-tech product at the price of a standard one.
