

NEW OPTION ON JOSKIN SLURRY TANKERS

In order to place and use a funnel more easily, JOSKIN has developed a special stand on the pumping arm. Thanks to this, the user can easily place his funnel in the area where he is going to pump. In this way, movements to the pumping tool are reduced and it is not necessary anymore to fasten the funnel on the tanker side.

It is hitched in three points: two upper hooks and a lower fastening with spring which is also used as a safety device. Once the latter is locked and the arm lowered, the funnel is on the ground.

Its position then only has to be adapted so as to make pumping possible.

This lifting device combines ease of use and minimal overall dimensions.
