

NEW OPTION ON JOSKIN SLURRY TANKERS

The Belgian company JOSKIN, which is specialized in agricultural trailers as well as in slurry and muck spreaders, extends its range of slurry spreaders with a new option for the JUMBO pumping arm.

JOSKIN indeed meets many customers' wishes by proposing to mount the JUMBO pumping arm on the side.

This arm provides a high pumping power thanks to, among other things, the 8" pipe.

It can be mounted on the left- or right-hand of the tanker. Thanks to its easy and strong construction, the JUMBO arm provides a high suction power at low cost.

Lowering and raising the arm can be done through a double-acting cylinder which is controlled from the tractor.

In transport position, the arm is held by a safety hook, just like all other JUMBO arms. It is possible to unlock the hook mechanically with a cord from the tractor cabin.

The new side pumping arm is available on Volumetra, Delta2, Modulo2 and Tetrax tankers.
