

## Scariflex R6S5 aerator and Scariflex R6S6 comb harrow

The SCARIFLEX aerator has already proven the working efficiency of the aggressive flexible tines acting as a garden rake on the grass in order to remove moss, dead grass and other foreign bodies.

This scarifying effect is greater on the brand new SCARIFLEX **R6S5** and **R6S6** models.

The **R6S5** model replaces the row of narrow blades of the well-known SCARIFLEX R5S by a **5th row of flexible tines**. Its aim is to further boost the meadows with a total spacing between the tines of 30 cm.

The **R6S6** model only has **flexible tines which are distributed over 6 rows with a total spacing of only 25 cm**. These ensure, with their vibrating effect, a complete work on the ground, not only on meadow, but also on grasslands or tiller lands, by way of mechanical weeding techniques, notably in the biological agriculture.
