

JOSKIN

Secrets of Quality

Since 1968, we have been drawing strength from our daily relationships with the agricultural world.

Our comprehension of your expectations, as farmers and contractors, is linked to our origins, in the heart of a rural region of grasslands. Anticipating your needs and delivering appropriate professional solutions, that has been our job for more than 50 years, but especially our passion for ever.

STRENGTH OF EXPERIENCE!

With more than 50 years of experience and more than 60,000 machines sold throughout the world, JOSKIN puts more than ever its resources at the farmer's service by offering products that are even more adapted to the agricultural world's evolution. To see through this mission, we are constantly investing in the design and production of your machines. Either in the research and development of new solutions, in production techniques or in the search for better materials, we are working hard to keep improving the production standards and offer you the best agricultural machines.

OUR ASSETS

R&D: a Solution to all your Needs

In order to efficiently and quickly face the constant evolution of your needs regarding agricultural machinery, a multidisciplinary team made of engineers, drawers and field workers, who are helped by dynamical three-dimensional engineering softwares, is daily focusing on the research and development of new innovative solutions.

Advanced Production Technique

In order to offer you the best agricultural machines, our factories are fitted with state-of-the-art, highly precise tools from the first production step to the last one.

Production Made by JOSKIN

For maximum finishings and quality of your machines, we chose to master their entire production. Thanks to our industrial organisation, we are developing and producing 85% of the components of your products by ourselves.

Quality Materials

For sturdier and lighter machines, we choose and sort out the best materials possible. Either with high tensile steel or Hardox, we make no compromise so as to supply you with a sturdy and durable machine.

OUR **SERVICES** TO YOUR SERVICE

Backed by his experience as a contractor, Victor JOSKIN has always considered the spare parts as being the nerve centre of the service: without spare parts, no repairs possible! Since a machine, even if it is highly efficient and equipped, will be out of order if even the smallest component is unavailable, JOSKIN has made an efficient service its priority. Given the permanent stocks of spare parts, we are guaranteeing you their availability even years later, which will secure the value of your machine through time. Our activity as regional dealer allows us to be daily on the field and it reminds us every day of the importance of a fast and quality service. Either regarding the before-sales advising or the after-sales service, we are working hard, together with our dealers, to ensure you an experience that meets your expectations.

A Quality Dealer Network

Backed by an international network of more than 600 dealers, JOSKIN is as close as possible to its customers and commits itself to supplying perfect machines, as well as an efficient after-sales service and support.

Tailored Advice for a Profitable Investment

To supply you with the ideal machine and avoid suffering the consequences of a bad choice for many years, JOSKIN bases its sales approach on a quality before-sales service and a high transparency of the information over its products. The JOSKIN product advisers are continuously trained, through very detailed "Dealers Trainings", in order to recommend you the machine that best meet your needs.

OUR SERVICES

SCAN ME

OUR SERVICES

A Quick, Easy and Efficient Access to Spare Parts

Our machines are delivered with a spare parts book, which is individualized according to the chassis number, containing only the components used to assemble your machine. Whatever your product, you are sure to find at first glance the right number of the spare parts you are looking for. You will then be able to order them easily from your dealer and get them rapidly. Thanks to our permanent stocks, we send them as quickly as possible.

An Efficient Support for Your Machine Maintenance

Through the MyJoskin online tool, we provide our network with all the necessary information for an optimal start-up and maintenance of your machines. The user receives, when his machine is delivered, an individualized parts book and a manual that he can also find on the JOSKIN website home page by entering the chassis number of his machine. Our technicians also travel the roads in order to assist and support the dealers' technicians in their mission.

YOUR **OPINION** MATTERS

“ I have been the owner of a JOSKIN slurry tanker (Volumetra 16500 D) for 4 years. To that end, my approach was rather particular... At an agricultural fair, I came across a JOSKIN technical-sales representative and started to talk to him. Unlike what I was expecting, he did not really try to give me answers. He did better: he could ask me the right questions. Surprising, but effective! After this discussion, I saw him a few weeks later at my farm. He was accompanied by a local dealer whom I was not used to work with. The dealer also surprised me with his knowledge of the JOSKIN product and the richness of his didactic supports. Convinced on all levels, we did business. Since then, and even if it was 4 years ago, I have never regretted this choice. I have made a far better use of my slurry since that day! However, since a machine remains a machine, I also had the opportunity to test the after-sales service's reactivity. After a minor accident against a post, I urgently had to replace a few spare parts on my spreading boom in order to finish a work right during the high season. Once again, I have nothing to say. The contact with the dealer did work perfectly and it could save the rest of my work. For me, JOSKIN kept all of its promises.

Mr. S. Marechal, France

In only 50 years time, JOSKIN has managed to become one of the biggest names in the agricultural world. Today, its machines crisscross the countryside all over Europe and in many regions of the world. Every year, machines are delivered to more than 60 countries. This impressive success is closely related to the company's DNA: an independent family structure with an entrepreneurial force and outstanding anticipative qualities. Driven by the willingness to internally master all strategic phases of the production and service chain in order to optimise them, the company has rapidly evolved as an international group. It has now 5 production factories that are perfectly adapted and strategically spread over the European continent.

50 YEARS OF EVOLUTION

The JOSKIN company, which is today internationally known, is first of all a family business founded in 1968 by Victor JOSKIN, who wanted to dedicated himself to the agricultural world. Marie-José JOSKIN, Mister JOSKIN's wife, joined him at the very beginning to ensure a sound treasury management of the company that kept growing. At the head of the company for more than 50 years, Marie-José and Victor were joined in the nineties by their 3 children, whom ensured a continuity in the family management of this true Belgian "success story". Vinciane, Didier & Murielle completed so the JOSKIN group's board of directors. Despite an outstanding growth and a presence across the world, the company's DNA, focusing on the family and its members' well-being, remained intact.

JOSKIN takes on the challenge of slurry injection

A PRODUCT FOR EVERY NEED

Aiming at an efficient, durable and affordable agriculture for as many people as possible, JOSKIN rapidly tried to produce quality implements that were perfectly adapted to the challenges of our time, while providing a real added value. From this wish, the company now offers one of the biggest ranges in the world in its field of activity. This range is built around 3 main axes:

- **Spreading:** While many people considered organic residues as common waste, JOSKIN has always seen them as a rich and abundant natural resource with a high fertilising potential. From this interest arose a complete range of spreading implements (tankers, muck spreaders, injectors, etc.), which provide the users with an exemplary reliability and a real return on investment.
- **Transport:** Often considered as an obstacle to productivity, transport has on the contrary always inspired our teams. The JOSKIN vehicles not only allow to combine business with pleasure thanks to a well-thought comfort and ergonomics, but they also ensure you a maximal profitability given the high loading capacities and the fully secured loads. Whatever your farm size, the JOSKIN transport vehicles are a first-choice logistics solution.
- **Livestock and grass care:** Anchored in a grass area, our company has always been close to customers looking for quality implements allowing them to efficiently take care of their pastures. Convinced that growing grass is a full-time job necessary to get a good quality final product, JOSKIN has rapidly made it one of its specialties. Our company now benefits from the industrialisation of its production force to keep innovating and offer implements that are even easier to use and more efficient.

SLURRY TANKERS

42 VERSIONS

A Concentrate of Experience

With almost 40,000 tankers sold to this day, JOSKIN has a widely recognised experience and a technical expertise on the international level. From the easiest to the most technological one, our slurry tankers cover all needs and meet a high level of requirements regarding reliability, sturdiness and safety. Based on this know-how, a large part of our range has a self-supporting structure. Tanks are welded over their whole length and width on a so-called "integral" cradle. Thanks to this principle, traction strains are more homogeneously distributed over the whole tanker, but the total weight is also reduced. This design type is more compact but also provides the vehicle with a lower centre of gravity, which improves its manoeuvrability.

Universal Chassis, the Key to Success

Next to the self-supporting models, JOSKIN also offers a wide range of tankers with independent universal chassis. Particularly suitable for heavy duty works, these models allow to focus all strains occurring during transport as well as the efforts of the rear implement directly on the chassis. Their tank is therefore fully protected. This design is compatible with all JOSKIN spreading systems and allows to move the tank in order to better distribute the loads depending on the weight of the rear implement.

SPREADING BOOMS

24 VERSIONS

Increase the Efficiency of Your Organic Fertilisers!

Making an optimal use of farm manure means using a rich and abundant resource to increase the yield of arable lands and meadows at a limited cost. In order to keep the natural properties of these organic fertilisers as much as possible, the JOSKIN spreading booms were studied to significantly reduce volatile losses. The slurry remains in this way very rich in organic matter, nitrogen, phosphorus, potash, magnesium, etc. Fitted with line hoses or skids to be used on arable lands or meadows, the JOSKIN spreading booms allow, given their large working width, to quickly and homogeneously spread slurry over large surface areas.

INJECTORS

33 VERSIONS

Efficiently Use Your Livestock Manure!

Supporting a durable and sustainable agriculture, JOSKIN rapidly tried to improve the slurry spreading techniques and he was even one of the pioneers in the design of injection implements. As a result of this work, the range of JOSKIN injectors can cover all needs: injection in meadows (with discs, skids or shares) and in arable lands (with rigid tines, spring tines and discs). By introducing the slurry directly in the ground, our injectors avoid any possibility of ammonia losses and allow to make an efficient use of all fertilising properties of your slurry. For these same reasons, they will reduce the bad smells for your neighbours and form a profitable investment on the very short term!

Efficient and Easy Cleaning

The JOSKIN hydrocleaners are designed to efficiently support you in all your cleaning works. To that end, they are fitted with an industrial vacuum pump, a high-pressure water pump and a galvanised tank with water/mud partition. Designed on this common basis, the range includes 2 separate categories of products both for specific uses. Fitted with a dorsal boom, a tipping tank and a 120-l/min/120-bar very powerful high-pressure pump, the tipping hydrocleaners are designed for an urban use, like cleaning street drains, sewers, etc. Thanks to their specific tank capacity and their 70-l/min/70-bar high-pressure pump, the Modulo2 Hydro-Vacuum are rather aimed at a domestic use, like emptying septic tanks and other similar works.

MODULO2 HYDRO-VACUUM

Water: 1,500 → 2,000 l
Mud: 6,900 → 12,000 l
Pumps: DL 180 + HP 70

from € 31,970*

HYDROCLEANER

Water: 2,000 → 3,000 l
Mud: 4,000 → 9,500 l
Pumps: DL 180 + HP 120

from € 65,765*

OUR ASSETS

- ⊕ Reinforced, lowered chassis for more stability when driving and a high load capacity
- ⊕ Optimised floor height to load and unload more easily
- ⊕ 4 cm edge on the trailed and semi-mounted WAGO to hold two 120-cm Palox or Europalets side by side
- ⊕ Hydraulic side ladders available as an option to easily secure the load

Our Transport Solutions

JOSKIN offers a wide range of bale trailers and low loaders that can cover all uses. Benefiting from the advantages of a modern and standardised production, these trailers are made of high tensile steel, which ensures a very sturdy design. Whatever the model, every detail has been studied to provide the users with a maximal load safety as well as with an unmatched manoeuvrability and driving comfort. In total, 4 bale trailer and low loader types are gathered under the WAGO name: the "trailed" and "semi-mounted" models to transport bales of straw, haylage or hay and Palox, as well as the "Loader" and "Carrier" models that are optimised to transport both bales and implements or even machines.

Safe and Comfortable Transport

JOSKIN livestock trailers are thought and designed for your cattle! Available with a reclining system (RDS) or a loading ramp (R), they provide the animals with a high comfort and the cattle farmer with a high ease of use. Every element on the Betimax has been optimised to ensure a maximal safety to you and your animals: non-slip body floor, full opening rear door, rounded angles on the wheel cases, etc. They are perfectly watertight, they are fitted with a coating with high-resistance against the effect of faeces and they are also very easy to maintain.

MEADOW AERATORS

58 VERSIONS

Maximise the Potential of Your Meadows!

Our range of aerators is designed to efficiently maintain and regenerate your meadow and, in this way, make sure there is enough quality grass at all times. Thanks to a particular combination of tools, specific adjustments and an adapted weight, every machine is configured to deal with more or less intensively moss, grass weed, molehills, etc. in meadows. Available in many different widths (up to 9.6 m), JOSKIN meadow aerators are suitable for all surface areas and all types of tractors.

PASTURE TOPPERS & CHOPPERS

13 VERSIONS

A Perfectly Spread Quality Cut

The JOSKIN rotary pasture topplers and choppers are sturdy, energy-efficient implements that will transform your tractor into a high-performance machine to make your pastures greener, more regular and richer in a short amount of time. They were specially studied to meet the various agricultural (mowing leftovers, fallows, etc.) and horticultural needs (maintenance of open spaces, brush clearing, etc.). Driven by a vertical transmission shaft, their cutting system ensures a precise cut of the vegetation. The skids can easily be adjusted to modify the cutting height and, in this way, ensure an horizontal and regular grass cut in all circumstances.

Tankers Suited to Your Livestock

JOSKIN developed a range of water bowsers to provide the cattle with optimal drinking conditions, while ensuring a maximum handling comfort to the cattle farmer. Manufactured in high tensile steel with the same tested techniques as the slurry tankers, the Aquatrans are compatible with a lot of options that do not require any pre-equipment (drinking trough, etc.). They are available as a mobile version but also as static model, for other uses like storing water, etc.

**STATIC AQUATRANS**

1,100 → 5,100 l

For a Perfect Slurry in a Twinkling of an Eye

The JOSKIN JUMBOMIXER is a sturdy and powerful machine designed to optimally mix slurry in pits. Its propeller, driven by 540-rpm to 800-rpm Walterscheid P.T.O.-shaft, is specially designed to mix high quantities of slurry while chopping it. It allows to mix and distribute the different slurry settling layers for a perfectly liquid result with a homogeneous amount of fertilising elements.

ADVANTAGE SERIES

ADVANTAGE

With the "Advantage" concept, JOSKIN wanted to prove that it was possible to reduce the price of agricultural machines without having an impact on quality. To get rid of this budget constraint, JOSKIN bet everything on a "mass" production that was until then not used in the agricultural trailer sector. The concerned models are indeed assembled on dedicated assembly lines so as to produce identical series of machines. Producing a large quantity of a model implies more advantageous prices for the raw materials, a more profitable distribution of the workforce and a higher efficiency of the automated machines. The resulting savings have then a direct impact on the selling price and allow to deliver a high-tech product at the price of a standard one.

OUR **ASSETS**

- +** Evolving range of high-tech machines at best price
- +** Full standard equipment to perfectly meet your needs
- +** Maximum quality and reliability thanks to the series production
- +** Large stock available at the authorized dealers of the JOSKIN network for a very fast delivery

OUR SHOP

THE SHOP

JOSKIN.COM/SHOP

Agriculture is more than just a job...

In order to further feed its fans' passion, JOSKIN offers a wide range of clothes and articles with the JOSKIN logo (jackets, coveralls, backpacks, mugs, etc.). The reputation of the JOSKIN machines throughout the world has attracted the main toy and scale model manufacturers. We are therefore proud to offer you more than 50 scale models of our machines. Are you either a kid or a collector, you will always find something you like in our shop.

To learn some more about the future JOSKIN accessories and clothes that will come into your vitrine and wardrobe, visit our online shop at any time on www.joskin.com/shop. Our products are also available in the showroom of our headquarters as well as on our stand during the various agricultural trade fairs and exhibitions.
